PROFESSIONAL SUMMARY

Computer Science student who has a good background in machine learning and work involving data. Knowledgeable in working with datasets, creating models, and deploying applications using modern tools and frameworks. At ease with structured data and transforming it into valuable products. Concentrated on the creation of practical and reliable solutions and on the constant enhancement of technical knowledge and understanding.

EDUCATION

B.Tech in Computer Science and Engineering
KIIT University, Bhubaneswar, India

Expected Graduation: 2027
CGPA: 8.99

SKILLS

Languages : Python, C/C++, MySQL,

Machine Learning : Scikit-learn, Pandas, NumPy, Matplotlib, PyTorch, Seaborn, Feature Engineering

Deployment & Tools : Streamlit, Tableau, Jupyter Notebook, Google Colab, GitHub

Soft Skills : Problem Solving, Analytical Thinking, Team Collaboration, Time Management

Web Technologies : HTML, CSS

EXPERIENCE

EliteTech Intern – Data Science Intern

Remote — May 2025–June 2025

- Built data preprocessing workflows using Python and Pandas for structured datasets.
- Developed machine learning models for churn prediction and digit classification, focusing on improving performance and reliability.

Pinnacle Labs – Programming Intern

Remote — May 2024–June 2024

- Implemented C-based console applications including ATM Simulator and Grade Tracker
- Applied structured programming, modular design, and file handling for data management.

PROJECTS

Research Paper: AI-Driven Adaptive Task Offloading in Fog–Cloud Architecture for Smart Healthcare Monitoring | Minor Project | KIIT University

- Co-authored a research paper proposing a Q-Learning based adaptive task offloading framework for healthcare IoMT systems.
- Designed intelligent scheduling between fog nodes and cloud servers using latency, energy availability, CPU demand, and task deadlines.
- Demonstrated 15–20% reduction in response latency and 10–15% lower energy consumption through Python-based simulation experiments.

MindPulse AI — Student Stress Detection System —

- Achieved a logistic regression model with 98.75% precision in predicting stress based on lifestyle was trained.
- Developed an NLP pipeline (TF-IDF and Naive Bayes) to classify emotional text and implemented the model with Streamlit.

Campus Placement Readiness Intelligence System

- Trained an SVM-based predictive model with Explainable AI, attaining an AUC of 0.91 and an F1-score of 0.91.
- Set up a Streamlit dashboard that offers placement probability, risk level, and actionable insights.

AI-Enabled Line Following Robot with Intelligent Obstacle Avoidance | AI Lab Project | KIIT University

- Collaborated in a 5-member team to develop an autonomous robot using Arduino Uno, IR sensors, ultrasonic sensor, servo motor, and L298N motor driver.
- Built a system capable of line tracking, obstacle detection, directional scanning, and path re-alignment using embedded control logic.
- Contributed to technical documentation, testing workflow, repository management, and final project demonstration.

Boston House Price Predictor –

- Created a prediction model based on XGBoost Regression using Socioeconomic Data, achieving an R^2 score of 0.90 using structured socioeconomic data.
- Implemented a comprehensive model development workflow that includes pre-processing, Feature Engineering, Evaluation, and Model Deployment.

Diabetes Prediction –

- Devised an SVM-based classifier using Python and Scikit-learn on medical diagnostic datasets.
- Applied pre-processing, feature selection, and evaluation techniques to improve model performance.

Car Mileage Prediction System –

- Formulated a regression model to estimate vehicle fuel efficiency (MPG) using structured automotive data.
- Executed preprocessing, exploratory data analysis, and model evaluation to improve prediction accuracy.

Loan Status Prediction –

- Built a classification model to predict loan approvals using financial and demographic data.
- Performed data cleaning, feature encoding, and evaluation to ensure reliable model performance.

ACHIEVEMENTS

AI, Machine Learning & Data Science

- Machine Learning A–Z: AI & Python – Udemy (2025)
Comprehensive training covering supervised/unsupervised learning, deep learning basics, and practical ML projects.
- Python – Kaggle (2026)
Hands-on coding course focused on Python fundamentals, functions, and data handling.
- Deloitte Data Analytics Job Simulation (2025)
Completed real-world data analytics tasks including visualization, interpretation, and forensic technology workflows.
- Introduction to Data Science – Cisco Networking Academy (2026)
Covered data analytics fundamentals, visualization techniques, and AI concepts for decision-making.
- AI Tools & ChatGPT Workshop – Be10x (2026)
Practical workshop covering prompt engineering, AI-assisted coding, and productivity automation.
- Agentic AI Bootcamp – UiPath Student Community, KIIT
Hands-on training on intelligent automation, AI agents, and applied automation use cases.

Cloud, Programming & Technical Training

- Cloud Security Essentials – AWS Training (2026) Covered shared responsibility model, cloud risks, and best practices for securing cloud environments.
- DSA for Product-Based Companies Training (2025) 30-hour live training program on Data Structures, Algorithms, and problem-solving techniques.

Additional Certifications & Achievements

- Google Digital Garage – Fundamentals of Digital Marketing (2023)
- TCS iON Career Edge – Young Professional (2023)
- Achievers Award – Academic Excellence (Class 10 & 12)
- Quantum Computing – CDAC Hyderabad & IIT Roorkee (2025) Government-supported course introducing quantum computing principles and future applications.
- Graph Theory Programming Camp – AlgoUniversity (2026) Completed advanced training in graph algorithms and solved 17 problems covering BFS, DFS, and shortest path techniques.
- JAVA Course – E-LABS, KIIT (2024–25) Completed 4-week academic training in Java programming fundamentals.
